

case study

Golf Club offices have LVTs installed on loose laid InstaLay

Products used: **InstaLay 30hg (3mm high grab loose laid to the sub-floor)**

Floor finishes: **LVTs – ‘Adore’ square edged wide planks**

When LVT flooring was installed during refurbishment of the offices at Traditions Golf Club in Surrey, the client, Red Mist Leisure, specified InstaLay self-adhesive underlay as it could meet several important requirements.

The customer wanted a durable floor combined with underfoot comfort provided by anti-fatigue cushioning. High levels of acoustic performance were also needed so as to prevent impact noise being transmitted to commercial premises on the floor below.

The InstaLay 30hg (high grab) adhesive underlay was loose laid over the concrete floor. Any minor sub-floor imperfections were masked by the rubber crumb underlay, which avoided having to use any costly and time consuming wet screeds.

As the release film was removed from the InstaLay to reveal the adhesive membrane, the wide plank square edged LVTs were positioned and simply pressed into position. This enabled a very quick, clean and easy installation which was completed in one visit, thereby minimising office downtime and significantly reducing time and costs.

The InstaLay self-adhesive system also offers numerous additional benefits over traditional methods of fitting LVTs:

- Wet adhesives were not required, which avoided problems associated with late placement or using the wrong notch trowel.
- The pressure sensitive adhesive provides an excellent bond for the LVTs, yet a tile can be re-positioned during installation if necessary.
- It is durable, long lasting, hygienic and will not collapse over time.
- It allows easy replacement of damaged tiles.
- It is extremely fitter-friendly, being clean and easy to work with.
- InstaLay high performance, self-adhesive, acoustic underlay, when installed beneath luxury vinyl tiles in a registered installation, is guaranteed for 15 years from the date of installation.
